Penguin Computing Among the 50 Fastest Growing Private Companies in Silicon Valley

2015-10-17

Enterprise and High-Performance Computing Leader Achieves Prominent Ranking

FREMONT, Calif. (Oct. 16, 2015) – The Silicon Valley Business Journal ranked Penguin Computing, provider of high performance computing, enterprise data center and cloud solutions, 35th on its list of the 50 Fastest Growing Private Companies in Silicon Valley. The regional business newspaper's annual rankings are based on a company's percentage of revenue increase over a three-year period. Penguin Computing is realizing strong growth based on both its high-performance computing (HPC) and enterprise business. This includes establishing leadership roles in cloud computing for the data center and data centric computing. The company's Penguin Computing on Demand (POD) provides a high-performance, bare-metal, HPC computing environment in the cloud. "This award signifies the exceptional talent and dedication of our employees and the emphasis we place on understanding and meeting our customers' computing needs," said Tom Coull, CEO, Penguin Computing. "The greatest reward is seeing our customers solve some of the world's most complex business and scientific challenges through the implementation of our systems and services." Penguin Computing's customers include agencies of the federal government and companies in sectors such as manufacturing, life sciences, energy, financial services and education. The 50 Fastest Growing Private Companies in Silicon Valley are highlighted in the October 16 issue of the Silicon Valley Business Journal.
